

DATABASE MANAGEMENT SYSTEMS LABORATORY-18CSL58

MINI-PROJECT

SYNOPSIS

Title of the Project: Payroll Management System

Project Description:

The actual problem is to maintain different database for an organisation whose main purpose is to issue pay-slips for their employees every month working in various departments of the organization, and maintain details of all the departments, employees with various grades, their designations and address details.

It deals with the financial aspects of employee's Salary, Deductions, allowances, Net pay. The user can view the account of each and every employee's and update their payments, and the user can also manage deductions, modify overtime and salary rate. Furthermore, it will develop for company management and enhance business in market and maintain the prestigious and reputation of the company. Others, facilitate the company to handle all the legal process and employee's expenditure properly and systematically. Especially in Software organizations or for legally binding representatives in any association, the worker compensation depends on the days he/she has worked. Depending on the company in question, a full range of other deductions may be calculated, withheld, and processed as part of payroll administration .

Payroll systems manage everything having to do with the process of paying employees and filing employment taxes. They are put to keep track of worked hours, calculating wages, withholding taxes and other deductions, printing and delivering checks and paying government employment taxes
